

# MX Logic®

## The Business Benefits of Email Defense

Spam now accounts for more than 80% of all email traffic.

**MX LOGIC® THREAT CENTER**

93% of organizations have had a virus, worm or Trojan Horse successfully infiltrate their network through email.

**OSTERMAN RESEARCH, INC.**

More than any other email defense solution, the MX Logic® Email Defense Service meets the unique needs of businesses that require enterprise-grade service reliability and performance, without enterprise-level complexity and cost. The fully-managed service frees customers from day-to-day email threat management, while protecting the network infrastructure from the outside to greatly minimize risk and liability.

### INTEGRATE NETWORK BORDER EMAIL PROTECTION

The MX Logic Email Defense Service protects businesses at the network perimeter, the most effective way to defend the entire email system from unwanted and unsolicited email. Our email security technology is positioned between the Internet and the business network to identify, quarantine, block and strip email threats before they can penetrate the firewall and cause damage and disruption. MX Logic protects the entire email network using a precise combination of spam filtering, fraud protection, virus and worm blocking, content and attachment filtering, and email attack protection. With rapid activation and effortless configuration, your business can integrate the MX Logic network border protection technology to begin reducing the risk, expenses, and wasted time associated with unwanted email.

### REDUCE MAINTENANCE, AVOID ADDITIONAL HARDWARE OR SOFTWARE PURCHASES

Unlike appliances and software solutions that require integration, migration and a significant amount of ongoing maintenance, the MX Logic® Email Defense Service greatly reduces the time IT managers and staff must spend handling spam, monitoring virus activity, and stopping email attacks. The service is effortless and highly effective – requiring no additional hardware or software or the constant diligence needed to apply and integrate updates, new patches and filters. With a simple redirection of your mail exchange (MX) record to MX Logic, our service provides around-the-clock email threat protection with virtually no IT intervention required.

### ELIMINATE ON-GOING EMAIL MONITORING WITH THREAT CENTER PROTECTION

MX Logic works around the clock to detect and defend against new email threats, enabling customers to free up the time and resources necessary for email oversight. Within our sophisticated streaming data environment, we monitor the global state of email for spam, viruses, worms and other email threats 24 hours a day, seven days a week. As new email threats are detected by the MX Logic® Threat Center, new rules for blocking those threats are seamlessly integrated into our filtering layers to automatically protect our customers. MX Logic's proprietary WormTraq® detection system identifies and intercepts zero-hour mass-mailing worms before they enter or leave a corporate network, and can be immediately reprogrammed to block impending threats.

### REDUCE IT-RELATED COSTS

Businesses can eliminate risk and unnecessary costs because MX Logic filters and blocks threats before they can enter the corporate network and then stores suspect messages in a safe quarantine outside of an organization's network. By reducing

## HIGHLIGHTS

- Integrate network border email protection
- Free up IT resources and reduce costs
- Benefit from MX Logic® Threat Center around-the-clock protection
- Increase employee productivity and control
- Implement effortless email filtering policy-setting including group policies
- Safeguard business integrity
- Simple, effortless activation
- Secure message delivery via Transport Layer Security (TLS)

With no on-going maintenance costs, and no software or hardware to purchase, businesses benefit from an economical, worry-free email defense from MX Logic. Find out how you can leave the email threat management to us and have more time for top priority technology projects by calling 1.877.MXLOGIC or visiting us at [www.mxlogic.com](http://www.mxlogic.com).

incoming mail volume by over 50 percent, our service eliminates the need for additional storage and bandwidth required to deliver and store the unwanted email, and the risks of server overload – both of which are becoming more common with the increase in mass-mailing attacks.

### INCORPORATE EFFORTLESS POLICY-SETTING AND ADMINISTRATION

Using the MX Control Console<sup>SM</sup>, an intuitive Web-based email threat management platform, administrators can effortlessly fine-tune email defense policies. With this administration and reporting tool, businesses have the flexibility to establish email protection policies, set domain-level rules, establish group filtering policies, and decide which type of email should be allowed and which should be denied. Real-time, daily, weekly and monthly reports also allow IT staff members to quickly analyze and track email traffic and trends in order to improve overall performance and isolate issues before they become problems.

### INCREASE EMPLOYEE PRODUCTIVITY AND CONTROL

With MX Logic blocking over 99 percent of spam, while delivering industry-leading low false positive rates, employees spend virtually no time sifting through junk email to find legitimate messages. Suspect emails are stored in a safe quarantine outside the business network and never reach the recipient's mailbox, while IT administrators have the option of establishing end-user quarantine management parameters. MX Logic Spam Quarantine Reporting enables end users to take action on their own spam quarantine and determine how items captured by the filter should be handled in the future.

### SAFEGUARD BUSINESS INTEGRITY

MX Logic® Outbound Message Filtering and MX Logic<sup>SM</sup> Disaster Recovery Services provide two additional layers of network protection. With Outbound Message Filtering businesses can safeguard and protect valuable proprietary or private information, and add footers or disclaimers to all outbound messages. Both of our disaster recovery services – MX Logic<sup>SM</sup> Message Continuity and the MX Logic® Fail Safe Service – ensures that your business will never lose an email by providing automatic email backup protection in the event of an unplanned server or network outage, or during planned maintenance. Message Continuity also provides Web-based email access, management and use, limiting business disruption during outages.

### MORE SECURE MESSAGE DELIVERY

Organizations that require a greater level of security for inbound and outbound email traffic can feel confident in MX Logic's Transport Layer Security (TLS) protocol. MX Logic accepts and filters encrypted inbound and outbound messages and delivers them across a secure tunnel when recipients are TLS enabled. If a recipient is unable to receive a TLS encrypted tunnel, MX Logic will deliver the message via standard SMTP.

### ADDITIONAL PROTECTION FROM COSTLY AUDITS, LAWSUITS AND GOVERNMENTAL INVESTIGATIONS

MX Logic Message Archiving, powered by MessageWatcher®, helps businesses – particularly public companies and those in healthcare, financial services, law and insurance industries – to comply with regulatory and workplace compliance regulations. This convenient, cost-effective managed service enables businesses to monitor, store and retrieve inbound and outbound company emails in order to minimize the cost and risk associated with non-compliance, loss of proprietary information and inappropriate employee emails.

#### ABOUT MX LOGIC

MX Logic is a leading provider of managed email and Web security services that deliver enterprise-grade performance without enterprise-level complexity and cost. Our easy-to-use, award-winning services reduce risk and liability, lower overall IT costs, and increase productivity. MX Logic services are available through our industry-leading partner network.
